

# OOP Using Java- Practical 01

---

1. Write your first java programme to display “Hello World” on the screen.

```
package com.mycompany.helloworld;
public class HellowWorld
{

    public static void main(String[] args)
    {
        System.out.println("Hello World!");
    }
}
```

2. Write a programme to display your name on the first line and to display your degree programme on the second line on the screen. Please use command line (cmd) to execute your code.

```
package com.mycompany.helloworld;
public class HellowWorld
{

    public static void main(String[] args)
    {
        System.out.println("Haritha Pawanjana ");
        System.out.println("BSC (HONS) IN COMPUTER NETWORKS ");
    }
}
```

## OOP Using Java- Practical 01

---

3. Write down a programme to get the following output using a for loop. Repeat the same example by using a while loop.

Executing Loop 0

Executing Loop 1

Executing Loop 2

Executing Loop 3

Executing Loop 4

```
package com.mycompany.helloworld;
public class HellowWorld
{

    public static void main(String[] args)
    {
        int a;
        for(a=0;a<=4;a++)
        {
            System.out.println("Executing Loop "+a);
        }
    }
}
```

### Using while loop

```
package com.mycompany.loop;

public class Loop
{

    public static void main(String[] args)
    {
        int a=0;
        while(a<5)
        {
            System.out.println("Executing Loop "+a);
            a++;
        }
    }
}
```

## OOP Using Java- Practical 01

---

4. Write a class and insert the following code block into the appropriate place. Execute the code and get the result.

“

```
int [] numbers = {10, 20, 30, 40, 50};
for(int x : numbers ){
    if( x == 30 ){
        break;
    }
    System.out.print( x );
    System.out.print("\n");
}
System.out.print("I'm out of the Loop now");
```

“

Results:        10  
                  20  
                  I'm out of the Loop now

Repeat the same code using “continue” instead of “break”. Write down the output.

Results:        10  
                  20  
                  40  
                  50  
                  I'm out of the Loop now

5. Write a class and insert the following code block into the appropriate place. Execute the code and get the result.

```
char grade ='A';
switch(grade)
{
case 'A' :
System.out.println("Excellent!");
break;
case 'D' :
System.out.println("You passed");
case 'F' :
System.out.println("Better try again");
break;
default :
System.out.println("Invalid grade");
```

## OOP Using Java- Practical 01

---

```
}  
System.out.println("Your grade is " + grade);
```

**Results:** Excellent!

Your grade is A

**Repeat the same removing “break” command at line number 6. Write down the output.**

Excellent!  
You passed  
Better try again  
Your grade is A

**Repeat the same scenario by using if-else-if statement instead of switch case.**

```
package com.mycompany.mavenproject5;  
public class Mavenproject5 {  
  
    public static void main(String[] args) {  
        char grade='A';  
  
        if (grade=='A'){  
            System.out.println("Excellent!");  
  
        }  
        else if (grade=='D')  
        {  
            System.out.println("You passed");  
        }  
        else if (grade=='f')  
        {  
            System.out.println("Better try again");  
        }  
        else  
        {  
            System.out.println("Invalid grade");  
        }  
        System.out.println("Your grade is " + grade);  
    }  
}
```

---

6. As of java 5 the enhanced for loop was introduced. This is mainly used for Arrays. Below code contains few mistakes. First execute the code. Then identify the errors printed on the console. Rectify all the errors and execute to get the output:

```
class TestEnhanceForLoop {  
  
    public static void mains(String args[]){  
  
        int [] numbers = {10, 20, 30, 40, 50};  
  
        for(int x : numbers ){  
  
            System.out.print( x );  
  
            System.out.print(",")  
  
        }  
  
        System.out.print("\n");  
  
        String [] names ={"James", "Larry", "Tom", "Lacy"}  
  
        for( String name : names ) {  
  
            System.out.print( name );  
  
            System.out.print(",");  
  
        }  
    }  
}
```

### Correct code

```
package com.mycompany.loop1;  
  
public class Loop1 {  
  
    public static void main(String[] args)  
    {  
  
        int [] numbers = {10, 20, 30, 40, 50};  
  
        for(int x : numbers )
```

## OOP Using Java- Practical 01

---

```
{  
    System.out.print( x );  
    System.out.print(",");  
}  
System.out.print("\n");  
String [] names ={"James", "Larry", "Tom", "Lacy"};  
for( String name : names ) {  
    System.out.print( name );  
    System.out.print(",");  
}  
  
}  
  
}
```

### Output:

**10,20,30,40,50,**

**James,Larry,Tom,Lacy,**
